The display described is assembled in particularly simple fashion from a housing (1), a printed-circuit board (18) fitted with luminous elements (19) and a front panel (2) with transparent zones in positions corresponding to those of the luminous elements. The invention proposes that the housing (1) is designed as a shell with integrally moulded light channels (14, 15) on the inside surface and a recess (25) for the front panel (2) on the outside, the printed-circuit board (18) being used as a cover over the back of the housing (1) and being connected to the housing (1) by snap-in connectors (10, 11, 12, 13).
